Case Study: Sam's Furniture

Sam's Furniture is a successful family-owned business near Dallas Texas. The majority of their business comes from lease-to-own furniture. To verify customer eligibility for credit, Sam's processes hundreds of credit applications every month.

Owner Seth Weisblatt approached Qrimp seeking a solution to improve upon their legacy technologies and increase turnaround time for credit approvals.

More Customers Processed

Qrimp built a web application to manage credit applications and wrote custom extensions to integrate Sam's existing back-office systems and software services for credit checking and marketing.

In the first 8 months after the implementation of Qrimp's tools, the number of applications processed by credit approval managers at Sam's Furniture **increased by 64%**.

"There's no way we could be processing the number of applications we are now if it weren't for Qrimp."

Leigh
Approval Manager

Increased Productivity

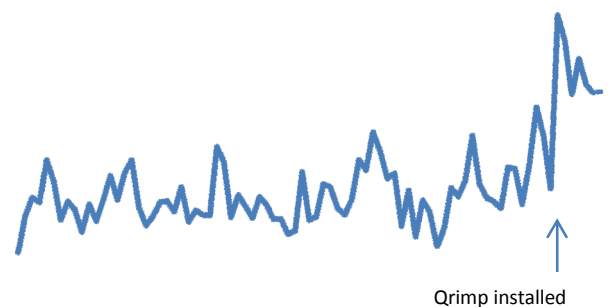

By reducing the amount of time it takes to process a credit application, Qrimp enabled Sam's employees to be more productive.

Experian Integration

Experian is a widely-used credit checking service. Qrimp integrated Sam's new credit system with Experian, to check credit information and bring it all into a centralized location.
